*carrier access billing system*

**CABS**  
BY CITYNET

## **CityCabs**

Carrier Access Billing, the billing of completed calls by a communications company is a very complex process. The first step is understanding the entire regulatory environment in the various states that the carrier operates. Next is determining the actual rates that will be charged for terminated minutes. This task is often daunting, to say the least. Finally, once the calls have been rated it is time to process the bills to other carriers and then collect the funds owed.

Overall the entire CABS process is a very involved and complicated system, one that can lead to a lucrative bottom line.

Carrier Access Billing (CABS) can be a very profitable revenue stream for any local exchange carrier, yet many companies rely on out-dated billing systems that ignore many completed calls, or rate those calls incorrectly. Citynet has developed a CABS solution that not only simplifies the process, but is so precise that your CABS bills will be virtually indisputable. CityCabs solution takes a systematic approach to analyzing the regulatory environment associated with CABS and Reciprocal Compensation, and utilizes your company's actual Call Detail Records to ensure that your CABS revenue is maximized. CityCabs invites you to view an on-line demonstration of its product so you can see how this it can increase your company's bottom line. Sign up today at <http://www.citynet.net>.

## **How does CityCabs help?**

Our team of telecommunication and software experts has great depth of experience in understanding the concepts of the regulatory environment. We help you analyze your regulatory position to ensure that all carriers are being billed at the accepted rate. Once you create the parameters of the system, CityCabs does an unbelievable job in identifying and rating all terminated minutes. There are absolutely no minutes terminated on your system that CityCabs does not account for. You bill every possible minute to the correct carrier – meaning you get the maximum revenue possible.

## **The System**

Created by a carrier for carriers, CityCabs acts as a service bureau for both ILECS and CLECS. In addition to the normal CABS processes, which are addressed within the framework of our system, CityCabs contains additional billing and terminating minute procedures to maximize your revenue. The system is hosted within the Citynet Server Farm across multiple databases and application servers. The backend database is built using SQL and all of the reporting via web access is built using a Cold Fusion Interface. Data within the server farm is backed up daily insuring a safe repository for all of your records. State-of-the-art firewalls insure security of your data!

## **Process Management**

The process in getting started is fairly simple. The backend software does all of the work you simply provide the data. Once you contract with CityCabs our software engineers will work hand in hand with your company's engineering team to extract the data from your switch and any tandem records that you have access to. This data will be deposited into a secure web directory within the Citynet Server Farm. Typically customers move the data via FTP to the web directory daily. Once the data is housed our team of engineers will setup nightly scheduled tasks to migrate the data from the web directory into a readable data warehouse within our SQL databases. After this transition, the data will be available to be rated and bills will be ready to be sent. CityCabs manages the entire billing process for you, including the presentment, printing, and mailing of all invoices.

**What about the regulatory work?** During the time that your data migration is taking place our regulatory team analyzes your ICA's and Tariffs - dissecting your regulatory headache. Once these steps are completed the billing process can begin.

## **Account Management**

Within CityCabs is an online Account Management System. This allows you to manage all of your Accounts Receivables Real-Time. You can post payments as they come in. Additionally, the system allows you to manage Account Contacts, Manage Disputes, View invoices, change billable rates, plus much more.

## **Take a Chance**

Whomever your company is using now for CABS service, we'd like to prove to you that we can do better...returning more revenue to you...with far fewer missed minutes! We are so confident in the success (additional money) that your company will see, we offer a 100% guarantee. This means that we will setup, analyze and rate all of your data comparing it to a previous month CABS bill. If the CityCabs solution doesn't add more money to your bottom line - your commitment to us is zero. That is how confident we are that CityCabs will find your company incremental revenue. Why not take a chance with CityCabs? This no cost guarantee will allow you to hold your present CABS billing company to higher standard, thus making sure that they are accounting for all of your revenue. Better yet, CityCabs will continue to provide accurate, timely and problem free CABS billing for you in future - at extremely competitive rates!

## **Feature Highlights:**

- Built by a Carrier
- Specify Unique Rates based on ICA's and Tariffs
- Bills Directly from Switch Records
- Ability to bill Wireless and ISP traffic
- CityCabs bills on Minutes of Use (MOU) and/or Mileage Specifications
- Ability to bill multiple Accounts
- Complete access to all bills and Call Detail Records as they pertain to a particular carrier

## Service Bureau Plans

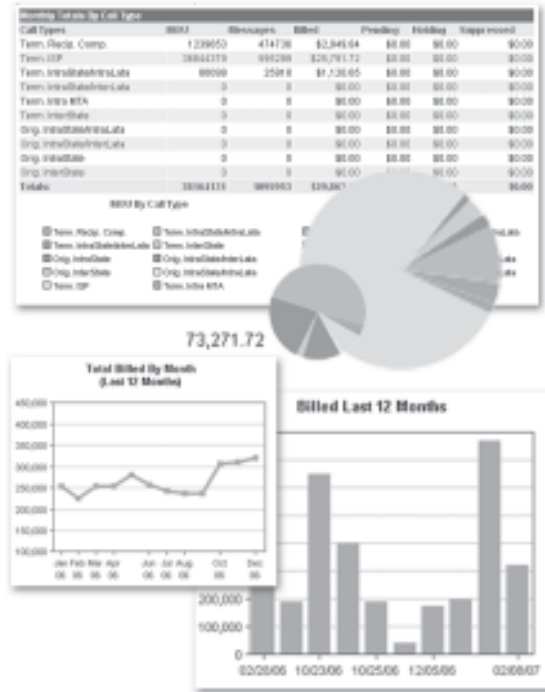

As a software service bureau, CityCabs can be purchased in three flavors:

**CABS Pro:** Already established and just need your records maximized. This basic plan is right for you. You FTP the data, we rate and bill for it, and you collect the money. CityCabs handles the creating, printing, and mailing the invoice you are responsible for the base data and collecting the money.

**Dispute Pro:** Need help managing or fighting for your disputes. Let the CityCabs regulatory experts fight for you. For a bit extra on your monthly fee, CityCabs will manage all of the disputes and fight for your money.

**Payment Pro:** Designed for the CLEC's and ILEC's that want to push the envelope with your billing. Within the regulatory world there is some "grey" area pertaining to Carrier Billing. Payment Pro allows your company to explore these "grey areas" without paying for it. You only pay as you get paid. We will not charge you for bills that are not collectable.

You really need to take a demo! Sign up today at [www.citynet.net](http://www.citynet.net) for a free online demo. The twenty minutes you will use visiting a working version of CityCabs could be the most profitable twenty minutes you've spent in a long time. You will be glad that you did!

## About Citynet
